

# PROPULSION HOUSE PULLING-*e*

CREATING THE NEW NORMAL  
FOR SUSTAINABLE SHIPPING

## TOWARDS ZERO-EMISSION SHIPPING CONCEPTS

Our mission is to provide top-of-the-class, tailored electrical products and propulsion solutions to the professional marine market, which will take the vessel concept and performance to an entirely new level.

We are committed to delivering the best made for the purpose. At competitive pricing and avoiding sub-optimization.

We are a newcomer to the market with a new kind of operational model. We base our performance on an experienced network of resources and front-runner experience during the last 25+ years in electrical propulsion and power plant concepts.

While the market is booming with the energy storage and battery solutions, we designed our very first one in the last millennium.

We have drawn hundreds of solutions for the electrical propulsion, out of which, many have been implemented successfully, utilizing the original concept.

We know what we are doing and what the market needs.

# COMPANY

Propulsion House Pulling-e was founded in 2022 by CEO Heikki Bergman.

Heikki is an expert on supporting conceptual decisions and pre-design in electrical ship concepts and modernizations. He has worked with power electronics since 1994, and entirely in the marine sector since 1998.

Due to our long experience with electrical propulsion and power plants, our team is a step ahead in the market. We develop and offer solutions, that enable the practical use of zero-emission power sources. We focus on weight & footprint reduction and efficiency improvement at the global vessel level.

We do this together with shipowners, ship designers and shipyards, allowing them to be experts in their own know-how.

Our two product portfolios are the development platforms, needed for the next generation in ship concept, or as we call it, "Generation ahead".
